SIMILARITY:

Generalizations, Applications, and Open Problems

August 11-15, 2008 | University of British Columbia

The aim of this conference is to bring together researchers who apply similarity analysis to engineering problems, researchers who are developing significant extensions of similarity methods so that they can be applied more widely, numerical analysts who develop and use similarity methods in their numerical schemes and software researchers who develop symbolic manipulation software to implement similarity analyses. It is intended that one afternoon will be devoted to discussion of open problems related to the objectives of the conference.

CONFIRMED PARTICIPANTS:
