PIMS Industrial Problem Solving Workshop

June 15-19, 2015
University of Saskatchewan

This workshop aims to create a mutually beneficial link between researchers in industry and academic mathematicians/statisticians. Research workers with industrial and commercial concerns are invited to present one of their current technical problems. Leading specialists from the academic community study these problems in teams during the week-long workshop, and present the results of their study back to the industrial participants at the end of the week.
