

July 22 & 23, 2011

2011 Prairie Discrete Math Workshop

University of Regina, Regina, Saskatchewan

The Prairie Discrete Mathematics Workshop (PDMW) has been held annually since 1995. The main objective of the PDMW is to bring together researchers who work in discrete mathematics and live in the prairie region (Manitoba, Saskatchewan and Alberta), as well as neighbouring provinces and states. The goal of this workshop is to present our current research and to provide opportunities for networking and joint work.

The 2011 event will be a two-day workshop that will cover a range of different areas of discrete mathematics and related areas of computer science. The University of Regina will also be hosting a related conference on graphs, designs and algebraic combinatorics immediately preceding this workshop.

invited speakers:

Richard Brewster

Thompson Rivers University

Shonda Gosselin

University of Winnipeg

Ben Li

University of Manitoba

Karen Seyffarth

University of Calgary

Chris Soteris

University of Saskatchewan

Sandra Zilles

University of Regina

All participants are encouraged to give a talk of 25 minutes duration. Some support for local expenses is available for graduate students and postdoctoral fellows attending this conference.

Apply online with your conference registration by **June 15, 2011**.

Funding for this conference was provided by
