

PIMS DISTINGUISHED LECTURER

# BUBBLESORT AND JUGGLING SEQUENCES

**Ronald L. Graham,**

Irwin and Joan Jacobs Endowed Chair  
Computer Science and Engineering  
Department and Chief Scientist,  
California Institute of  
Telecommunications and Information  
Technology

Univ. of California at San Diego

**Thursday, October 22, 2009**

**Time: 3:30 pm**

**Location: HSD A240**

In this talk I will describe some recent results concerning the connection between the bubblesort sorting algorithm and certain integer sequences used to analyze various juggling patterns. The analysis leads to new results on the joint distribution of the descent and maximum drop statistics of a permutation, as well as a new class of identities for the classical Eulerian numbers.
