MATHEMATICS OF HUMAN-ENVIRONMENTAL SYSTEMS & CLIMATE CHANGE IMPACTS

Join an intensive summer school focused on the mathematical modeling and analysis of human-environmental systems and their role in understanding climate change impacts.

Participants will explore how mathematics can be used to study complex interactions between human activity and environmental processes.

Learn More & Apply

Visit the program website for full details and application information.

August 6-14, 2026

University of Victoria

Who Should Apply?

- Graduate students
- Postdoctoral researchers
- Advanced undergraduate students (final year)

APPLY BY MAY 1, 2026

This summer school is supported by: **Maud Menten Institute**

A PIMS Research Network funded by the Pacific Institute for the Mathematical Sciences (PIMS)
